Dear Lattice Engineering Team,

I am writing to express my interest in the Software Engineer position at Lattice. With a strong background in software development and a passion for creating robust and maintainable code, I am excited about the opportunity to contribute to your team and help build products that enhance workplace culture.

In my recent role as a Software Engineering Director at Robotics 88, I architected scalable enterprise SaaS platforms, focusing on performance and maintainability. My experience with technologies such as TypeScript, React, GraphQL, Node.js, and PostgreSQL aligns well with your tech stack. I have a proven track record of driving complex projects to completion, often collaborating closely with cross-functional teams, including product managers and designers, to ensure a seamless product experience.

My work has always emphasized improving user experience and reducing pain points, as demonstrated by my development of a subscription management portal with a focus on user-friendly design and seamless integration. Additionally, I have experience in creating and updating technical documentation, ensuring that it meets the needs of all stakeholders.

I am particularly drawn to Lattice's commitment to continuous improvement and experimentation with new technologies. My approach to software development is highly collaborative and iterative, and I am eager to contribute to your engineering practices by identifying and implementing improvements that enhance team output.

Thank you for considering my application. I look forward to the possibility of discussing how I can contribute to the success of Lattice's Engineering team.

All Best,
Alex McPhail
